Home Collection for Identification, Genetics or Health Related Needs  
Food Testing  
Agriculture  
Water Testing  
Veterinary

## SAMPACT COLLECTION DEVICE

A specimen storage system designed to preserve the integrity of the sample during collection, storage, transportation and analysis

Allows for positive transfer of cells to membrane through compression of swab to paper

Can be adapted for custom applications

Designed to work with automated or manual punching systems

Reduces handling of the biological samples.

Contamination free storage and transportation

Supports a variety of samples

# SAMPACT™ Collection Device

A specimen storage system designed to preserve the integrity, enhance the collection and assure the quality of the sample during collection, storage, transportation and analysis

The Sampact™ is a polyurethane plastic device with the FTA® paper membrane loaded inside. When closed the lid onto the swab, it allows for positive transfer of cells to membrane through compression of swab to paper.

It is designed to work with automated or manual punching systems

Reduces handling of the biological samples. To insure a contamination free collection, storage and transportation

It supports a variety of samples. The Sampact™ can be adaptable for custom applications
